

# Xerox<sup>®</sup> Print Security Audit Service

Maintaining network and data security is one of the many challenges that businesses face on a daily basis. Networks and information are at constant risk of attack from external, and potentially internal, threats. Printers and multifunction devices receive and output intellectual property and sensitive information every day. Are you safeguarding your print environment?

### Manage the security of your Xerox® print devices.

The Xerox<sup>®</sup> Print Security Audit Service, for our Enterprise Print Services customers, helps secure printers and multifunction devices across your enterprise. We configure device settings against your security standards baseline and provide ongoing reporting to show compliance or highlight gaps that can then be addressed, giving you peace of mind.

#### It all starts with creating a security baseline.

Our Service Delivery Professionals work with you to review your security standards baseline to configure and drive consistent and uniform device behavior across your Xerox<sup>®</sup> Managed Print Services (MPS) environment.

- A configuration set is created and matched against your security standards and deployed to a single device, group of devices or your entire MPS fleet through Xerox<sup>®</sup> Device Manager.
- Reports are automatically generated to assess the device's compliance to your security baseline showcasing proof of compliance and/or calls to action for remediation, if necessary.

# Secure your print devices, conveniently and confidently.

## **Managing Device Security Features**

Xerox<sup>®</sup> Managed Print Services offers you peace of mind with device security features to meet your compliance such as:

- Access and Control
- –Enabling or disabling protocols
- -Enabling and disabling password resets
- -Allowing or prohibiting USB port scan to and print from activities
- -Enabling or disabling scan services on multifunction printers (MFPs)

- User Data Encryption
- Hard Disk Drive Administration —Immediate job overwrite —Scheduled image overwrite
- Firmware Support –Enable/disable firmware updates
- -Scheduled firmware upgrades

# **Ongoing Compliance and Reporting**

With the Xerox<sup>®</sup> Print Security Audit Service, we help protect your managed print services fleet from ongoing threats of security breaches through continuously monitoring and reporting activities that can be completed via scheduled time frames or invoked upon demand to meet your needs.

Filters can be applied to the reports to highlight compliance and/or noncompliance to select devices or the entire fleet.

### Xerox<sup>®</sup> Print Security Audit Service How It Works

We meet and review with you the security baseline standards you have established.

Your security baseline standards are uploaded to our managed print services tool, Xerox<sup>®</sup> Device Manager.

Xerox<sup>®</sup> Device Manager takes this baseline standard and updates the fleet of devices to your preferred settings.

Xerox<sup>®</sup> Device Manager inspects the devices and retrieves data to see if they are in compliance with the baseline standard.

Reports can be run to identify noncompliant devices. Action can then be taken to bring the fleet to the security baseline standard.
